

Recycling in Japan

These days, many people in Japan are interested in recycling. One reason is that protecting the environment is becoming more important in schools and companies. Now, some schools have started special classes where students learn about recycling and clean energy. Students take such classes, and by doing so they can learn how to take care of the Earth.

Your story should begin with this sentence: One day, Takuya and Yuka were talking about their teacher.

Recycling in Japan

These days, many people in Japan are interested in recycling. One reason is that protecting the environment is becoming more important in schools and companies. Now, some schools have started special classes where students learn about recycling and clean energy. Students take such classes, and by doing so they can learn how to take care of the Earth.

Q1. How can students learn how to take care of the Earth?

A. By taking classes about recycling and clean energy.

Your story should begin with this sentence: One day, Takuya and Yuka were talking about their teacher.

One day, Takuya and Yuka were talking about their teacher. Takuya said to her, "Today is our teacher's birthday!"

In the classroom, their teacher looked happy. Yuka said that she thought they should invite more people.

An hour later, the classroom was a big mess. Takuya and Yuka were cleaning the classroom by themselves.
